

PubMed

1. Perform a search and mark the references you would like to export to RefWorks (or leave the records unselected to export the entire result list to RefWorks).
2. Click on **Send to** [Send to:](#) (middle right of screen).
3. Select **File** from the resulting **Choose Destination** menu.

4. Upon selecting **File**, you will be presented with **Format** options. Change the **Format** to **MEDLINE**.

5. After changing the **Format** to **MEDLINE**, click on **Create File**.
6. **Save** the file. [You can use the default name for the file (**pubmed_result.txt**) or type in a new name.] **The file should be a text document.**
7. After saving the file, log in to your **RefWorks** account.
8. Mouse over **References** (upper left of screen, in gray bar)
9. Select **Import** from the resulting menu
10. From the resulting **Import References** box, select **NLM PubMed** as the **Import Filter / Data Source** and **PubMed** as the database.
11. **Browse** to find the file you saved to your computer; double-click on the file to place it in the **Select Text File** box.
12. If it has already been created, select the folder where you would like the reference imported (see **Import Into Folder** option near bottom of screen)
13. Click **Import** (bottom of screen).
14. The **RefWorks import screen** should appear – your records are in the **Last Imported Folder**. Click on **View Last Imported Folder** (lower right of screen).
