TITLE: Awards and Rejections

DESCRIPTION
Details how awards and rejections are handled by Sponsored Programs Administration and researchers at Creighton University.

PROCEDURE/PROCESS

Supplemental Information Prior to Award
Occasionally a sponsor will require additional information prior to an award. All responses to requests for additional information must be routed through Sponsored Programs Administration for review, approval, and signature of the authorized institutional official before they are submitted to the sponsor.

Notification of Award
Sponsors send notification of awards to Sponsored Programs Administration, the Principal Investigator, or the Program/Project Director. If Sponsored Programs Administration receives the award notice, they immediately send a copy to the Principal Investigator or Program/Project Director and the department administrator. Sponsored Programs Administration will request from the investigator a Creighton University Grants Budget Form to begin the establishment of a fund number for the awarded project. If the investigator receives the award notice directly, he or she shall forward a copy of the notice to Sponsored Programs Administration along with a completed Creighton University Grants Budget Form. The Principal Investigator or Program/Project Director shall notify co-investigators and other project participants of the award.

Pre-award Costs
Some sponsors, such as the National Institutes of Health (NIH), will reimburse investigators for pre-award costs incurred up to 90 days prior to the effective date of an award, if such costs are 1) necessary to comply with the proposed project schedule and 2) would be allowable under the grant, if awarded, without prior approval from the sponsor. Prior to incurring any pre-award costs, investigators shall complete the Request for Spending Authority Form and obtain appropriate signatures from his or her chair, dean, and vice president guaranteeing coverage of any pre-award costs if the grant or contract is not awarded.

Setting up a New Project Fund
The Creighton University Grants Budget Form is used to set up new project funds in Creighton’s accounting system. Sponsored Programs Administration will compare this
budget with the original proposal budget and with the award statement. Sponsored Programs Administration will then complete and submit the appropriate paperwork to Grants Accounting to set up a fund. Grants Accounting will notify the Principal Investigator or Program/Project Director of the fund number and will send a copy of the notification to the Department Administrator and Sponsored Programs Administration.

New project funds are set up according to the terms and conditions of the grant award statement or contract. Most grant funds are set up in full by budget year. For example, if an investigator is awarded a grant of $300,000 for three years and has budgeted $100,000 for each year, the University would set up a fund with $100,000 available for the first budget year.

Most funds for industry-sponsored studies are set up on a check-by-check basis. For example, in clinical trials, the sponsor’s distribution of funds often depends on the number of completed patients in the trial. The investigator shall provide information on completed patients to the sponsor and shall invoice the sponsor for costs expended, as defined in the terms and conditions of the contract. Upon receipt of a payment from the sponsor, the project budget is increased by the amount of the payment. The investigator must be able to cover costs up front, seeking reimbursement only after costs have been incurred. If the sponsor does not provide start-up funds, an investigator must find other resources to cover the costs of initiating the project. At Creighton, two options are available to assist investigators in initiating an industry-sponsored study, as follows:

- **Pooled funds**—A pooled fund allows an investigator to manage multiple industry-sponsored projects out of one fund. The investigator may initiate a new project by using money from the pooled fund until costs of the new project can be reimbursed. Pooled funds can be established for multiple studies awarded to one principal investigator, or for multiple studies awarded to various principal investigators within the same department. An investigator can establish a pooled fund for industry-sponsored studies if the following conditions are met:
  - All of the studies have the same indirect cost rate
  - None of the sponsors require external financial reporting

  If an investigator establishes a pooled fund, Grants Accounting will not be able to track the expenditures of individual projects within the pooled fund. If a PI wants to track expenditures for an individual project within a pooled fund, he or she will be responsible for maintaining books for the project. Upon receipt of the first check for the second industry-sponsored study, an investigator may establish a pooled fund by completing the Drug Study Pooling Form in addition to the Grants Budget Form and submit both forms to Sponsored Programs Administration.

- **Permission to set up a budget in full**—An investigator may request permission to have a project fund set up in full. In this case, the University makes available to the investigator the full amount of funds budgeted for the project, rather than increasing the fund only upon receipt of payment from the sponsor. This option works for investigators who do not have multiple studies to pool. To have a budget set up in full for a clinical study that is funded on a per-patient basis, the investigator shall complete the Request for Spending Authority Form and obtain appropriate
signatures from his or her chair, dean, and vice president guaranteeing coverage of
any not recovered from the sponsor. If this option is selected this study is exempt
from being pooled.

Managing Multiple-Year Awards
The way in which yearly renewal of awards is handled varies depending on the sponsor,
and is usually defined in the terms and conditions of the award statement. Most sponsors
require annual progress reports. For some sponsors, these reports function as the
application for renewal. Others require separate renewal applications. Some require a
statement of continued University approval in the form of a newly signed cover page.
Regardless of sponsor requirements, all yearly renewals shall be routed through Sponsored
Programs Administration with a Proposal Routing Form.

Federal law requires that Creighton obtain a yearly statement from Principal Investigators
or Program/Project Directors regarding any known or suspected conflicts of interest. Since
conflict of interest is addressed on the Proposal Routing Form, submitting the form at each
annual renewal ensures that this requirement is met. In addition, it helps Sponsored
Programs Administration keep track of progress on sponsored projects and maintain an up-
to-date and accurate database of sponsored project activity at Creighton.

Post-Award Activity
During the project period, all grant expenditures are reviewed and approved by Grants
Accounting according to the terms and conditions of the award statement and the Office of
Management & Budget (OMB) Part 200—Uniform Administrative Requirement, Cost
Principles and Audit Requirements for Federal Awards (“Uniform Guidance”). Throughout
the project period any required financial reports to the agency must be prepared and
submitted by Grants Accounting.

Investigators who have questions about moving funds within a project budget, carrying
funds over from one year to the next, or requesting a no-cost extension at the end of the
project period (request for additional time without a request for additional funds) should
contact Sponsored Programs Administration for assistance.

To request to move funds on a grant that has been awarded under expanded authority (as
stated in the terms and conditions of the award statement), investigators shall submit a
request in writing to Sponsored Programs Administration. Sponsored Programs
Administration will review the sponsor guidelines and award statement and, if the
requested change is allowable, will approve the request and forward it to Grants
Accounting. Grants Accounting will make the necessary changes in the Banner accounting
system.

If a Principal Investigator wants to request to move funds on a grant that has not been
awarded under expanded authority, he or she shall contact Sponsored Programs
Administration for assistance. The Principal Investigator will draft a letter of request to the
agency and submit to Sponsored Programs Administration for review and submission to the
agency. All requests to the agency must be co-signed by the Principal Investigator or Program/Project Director and the Authorized Institutional Official.

If a Principal Investigator wants to request a no-cost extension at the end of the project period, he or she should refer to the Sponsored Administration Procedure SPA-07, “No-Cost Extensions.”

**Rejections**
Sponsors usually send notification of rejections directly to the Principal Investigator or Program/Project Director, along with reviewer comments. If an investigator receives a rejection letter, he or she shall forward a copy to Sponsored Programs Administration. Investigators do not need to forward a copy of reviewer comments. However, if PIs would like assistance with revising a proposal, he or she may submit a copy of reviewer comments to Sponsored Programs Administration so they can help to determine how to develop a more competitive proposal. The Principal Investigator or Program/Project Director shall notify co-investigators and other project participants of the rejection.

**Requesting Feedback**
Whether an investigator’s proposal is funded or rejected, it is important to request feedback from the sponsor. Investigators should request a complete copy of reviewer comments, asking for detailed information on why the proposal was or was not funded. This information will prove helpful the next time the investigator applies for funding, whether it is for the same project or a new project. Investigators should use the feedback to evaluate the proposal.
