Effect of Outcomes Measurement Software on Student Learning and Incorporation of Ignatius Values in Continuing Medical Education

Abstract: Outcomes assessment software purchased with the funds provided by this grant will be utilized to provide course directors with feedback regarding the effectiveness in their courses in terms of: (1) changing participants’ competency; (2) improving participants’ skills; (3) affecting patients’ outcomes; and (4) incorporation of Ignatius values. Longitudinal data from this software will be coupled with serial evaluations of each CME activity in order to assess the effects of using these outcomes assessment measures on learner satisfaction and knowledge acquisition.
