Configuring CUWireless for Windows 7

In order to connect to CUWireless, click on your wireless connection icon, and view your available wireless.

Enter in your credentials with the following format.

It will prompt you that the connection attempt could not be completed, to which you click on the “connect” button.

After this, you should be connected to CUWireless. If you are still unable to connect, use the next steps in this document.
Advanced Configuring of CUWireless for Windows 7

1. Click on START Button.

2. Click on “Control Panel.”

3. In Category view, click on “Network and Internet.”
   (or if viewed by icons, click on “Network and Sharing Center”)

4. Click on “Network and Sharing Center.”

5. Click on “Manage Wireless Networks.”

6. Click on “ADD.”
7. Click on “Manually create a network profile.”

8. In the Network Name field, type ‘CUWireless’.

9. The Security Type is WPA2-Enterprise.

10. Leave all other settings on this screen as default (use below as reference).

11. Click Next.
12. Click on “Change connection settings” button.

13. Click on “Security” tab.

14. Click on “Settings”.

15. Within the Trusted Root Certification Authorities list, check “GlobalSign Root CA”.

16. Click on Configure.
If your computer is not joined to the Blue domain (using your netid and Blue password to log on), or your are logging on with a local account, uncheck "automatically use my windows logon name and password".

With this information, you should be able to manually configure your wireless settings to allow you to connect to CUWireless.

If you have any other issues, please contact the service desk team at 1111.
