* The computers will ship with the version of Microsoft Windows and Microsoft Office that is compatible with all applications required for course work. While we hope to load Vista and Office 2007 on the computers, several applications required for course work are not compatible with the new software. In June, we will make the final decision based on what our applications/vendors support. If we do load XP and Office 2003, we will be offering free upgrades to students who purchase through our program once the university is ready for the new software.
