

## CRITICAL THINKING Discussion Worksheet

### Interprets VS (T, P, R, BP, pain)

- Notify provider of abnormal VS results
- Able to answer questions about VS results either during simulation or during debriefing

### Interprets Labs

- Notify provider of WBC count abnormality and chest x-ray abnormality
- Able to answer question during simulation or debriefing regarding labs

### Interprets Subjective/Objective Data (recognizes relevant from irrelevant data)

- Identify abnormal lung sounds
- Able to answer questions regarding lung sounds and fluid balance during debriefing

### Formulates Measurable Priority Outcomes

- Identify top 3 nursing diagnoses before beginning simulation

### Performs outcome-driven interventions

- Apply oxygen, elevate HOB, administer lasix, and initiate IV fluid
- Administer nebulizer treatment

### Provides specific rationale for interventions

- Able to answer questions during simulation and in debriefing

### Evaluates interventions & outcomes

- Able to evaluate expected outcomes and modify as appropriate during debriefing

### Reflects on simulation experience

- Discuss strengths and weaknesses in debriefing
- All must participate
