Ever wondered how much energy your appliances use? Find out by checking out an OPPD Watt Detector Kit from any participating local library.

Watt Detectors calculate how much money or energy is being spent on an hourly, daily, monthly or yearly basis. Knowing this detailed information can help you make effective changes that lower the amount of electricity you use.

For a list of participating libraries and more program information, visit oppd.com/wattdetector or contact the OPPD Energy Advisor at 402-636-3850.
