Prevent Bed Bug Infestation

What are Bed Bugs?
- Small flightless insects
- Feed off blood of humans and other mammals
- Will not transit disease to humans
- Three basic life cycles – Eggs, nymphs (1/16th -3/16th inch) and adults (1/8th -1/4th inch)
- Adults – 6 legs, 2 antennae, very flat bodies, and reddish-brown in color

Where to Inspect?
- Sheets, pillows and blankets for stains
- Under mattress and pillows
- Seems and puckers of the mattress and box spring
- Floor and moldings

How to Prevent Bed Bugs?
Complete prevention may be impossible but here are some tips to minimize the risk of infestation:
- Launder bedding and clothing frequently.
- Vacuum regularly.
- Inspect secondhand furniture thoroughly before bringing them into your residence.
- Launder donated clothes before wearing.
- Reduce the amount of clutter to achieve a good treatment and eliminate hiding places.
- Inspect any room you're about to inhabit while traveling.
- Inspect your luggage and clothes for bed bugs when returning from a trip.

Signs of Bed Bugs
- Seeing live bugs, eggs, cast or shed skins, excrement or bloodstains
- Experiencing bites

What to do in case you find evidence of bed bugs?
- Do NOT try to treat the area yourself.
- Report it to Facilities Management immediately.
- Follow all the instructions given to you.
