Welcome to our February report covering results from Creighton’s January survey of supply managers and procurement experts in nine Mid-America states indicate that the economic growth has turned negative (recessionary) for manufacturing, but is stabilizing. **Economists Whisper the “R” Word: Watch Yield Curve for Clues of Recession**

Seven years of the weakest economic growth since 1937 and 2015 ending with economic growth close to zero have pushed some economists to issue 2016 recession alerts for the U.S. However, economic signals are truly mixed.

Recession harbingers: the national and Creighton regional ISM readings for manufacturing have been below growth neutral for three straight months; the U.S. stock market as measured by the S&P 500 index is down by 10.3% over the past six months signaling weak corporate profits; Fourth quarter 2015, U.S. worker productivity fell by 3%, GDP expanded by an anemic 0.7% and exports declined by $0.5 billion; the percentage of the U.S. population in the labor market is at its lowest level since 1978.

Growth signs: U.S. economy added 1,137,000 jobs over the past six months and the unemployment rate declined to its lowest level in 8 years; Average weekly earnings expanded by 2.5% over the past year (not great, but not bad); consumer spending rose by 2.2% in Q4, 2015.

However, the most telling statistic is the yield curve—the difference between the yield on the 10-year U.S. Treasury bond and the 2-year U.S. Treasury bond. When the short term bond yield rises significantly due Federal Reserve rate hikes and the long term bond yield declines due to investor's pessimistic outlook, the economy is likely to slow. Six months before the beginning of the last 3 recessions, the difference between these two bond yields sank into negative territory. While the difference in yields has been trending lower, it currently stands at 1.0%. Thus at this point in time, this important indicator is not signaling a 2016 recession, but keep an eye on it. **LAST MONTH’S SURVEY RESULTS**

**Mid-America Business Conditions Index Improves: Export Orders Plummet for January**

**SURVEY RESULTS AT A GLANCE:**

- For a sixth straight month, the region’s overall index moved below growth neutral.
- Weakness for Missouri, North Dakota, and Oklahoma, more than offset readings above growth neutral for the remaining six states.
- The strong U.S. dollar sank export orders, but boosted imports for the month.
- Employment index improved, but remained below growth neutral for a fifth consecutive month. Over the past year, the region lost almost 20,000 durable manufacturing jobs but gained approximately 3,000 non-durable jobs.

The Creighton University Mid-America Business Conditions Index for January, a leading economic indicator for a nine-state region stretching from Arkansas to North Dakota, expanded for the first time since June of last year, but remained below growth neutral.

**Overall index:** The January Business Conditions Index, which ranges between 0 and 100, improved to a still weak 48.3 from December’s 39.5. The regional index, much like the national reading, is now in negative territory indicating manufacturing losses linked to the strong U.S. dollar and to economic weakness among global trading partners.

The U.S. dollar strengthened by almost 9 percent since June of last year and on Friday, the dollar posted its largest gain against the Japanese yen since the fourth quarter of 2014. This, along with economic weakness among the nation’s chief trading partners, has squeezed, and will continue to squeeze, U.S. and regional manufacturers.

**Employment:** The regional employment gauge increased for January but remained below growth neutral at 49.3, up from December’s 37.1. Over the past year, the region has lost approximately 20,000 durable manufacturing jobs, or 2.4 percent of heavy manufacturing jobs. During this same period, the rest of the nation gained 7,000, or 0.2 percent, in durable goods manufacturing jobs.

Areas and industries heavily dependent on durable goods manufacturing, especially those linked to exports, agriculture and energy, are experiencing the largest losses.

This month businesses were asked to describe their hiring situation in January. Approximately 46.3 percent of the businesses reported that the number of applicants exceeded the number of available jobs at their firm. On the other hand, 18.5 percent of businesses reported shortages of workers for company job openings.

**Wholesale Prices:** The wholesale inflation index for January rose to 52.4 from December’s 48.2. Prices for raw materials and supplies, as reported by regional supply managers, are rising at a pace that will undercut the Federal Reserve’s goal of 2 percent growth in consumer prices. Confidence: Looking ahead six months, economic optimism, as captured by the January business confidence index, fell to 42.2 from December’s 49.1. Falling agriculture and energy commodity prices, along with global economic uncertainty, continues to restrain supply managers’ expectations of future economic conditions.

**Inventories:** In another sign of a sinking economic outlook, supply managers reduced their inventory levels for the month, though at a slower pace. The January inventory index, which tracks the change in the level of raw materials and supplies, increased to 49.3 from 43.6 in December.

**Trade:** The new export orders stood at a weak 40.0, up from 33.8 in December. The import index for January expanded to 53.1 from December’s 40.0. The strong U.S. dollar, making U.S. goods less competitively priced abroad, and a weaker global economy, hammered new export orders for the month. On the other hand, the
strong dollar, making foreign goods more competitively priced. The dollar has climbed by more than 8 percent since October 2015.

According to the latest U.S. government data, exports represent approximately 8.9 percent of the state's overall economy. This places Arkansas in 37th place among the 50 states. Since Canada is Arkansas's number one export market, exports will remain under pressure since the value of the U.S. dollar to the Canadian dollar has climbed by more than 8 percent since October 2015.

MINNESOTA
The January Minnesota Business Conditions Index jumped to 50.1 from December's 39.4. Components of the index from the monthly survey of supply managers were new orders at 44.8, production or sales at 46.5, delivery lead time at 55.3, inventories at 49.7, and employment at 55.9. According to the latest U.S. government data, exports represent approximately 5.7 percent of the state's overall economy. This places Minnesota in 39th place among the 50 states. Since Canada is Minnesota's number one export market, exports will remain under pressure since the value of the U.S. dollar to the Canadian dollar has climbed by more than 8 percent since October 2015.

NEBRASKA
January's Business Conditions Index for Nebraska climbed to 49.7 from December's 48.4. Components of the index from the survey of supply managers were new orders at 43.2, production or sales at 44.8, delivery lead time at 53.2, inventories at 49.0, and employment at 48.4. According to the latest U.S. government data, exports represent approximately 5.1 percent of the state's overall economy. This places Missouri in 39th place among the 50 states. Since Canada is Missouri's number one export market, exports will remain under pressure since the value of the U.S. dollar to the Canadian dollar has climbed by more than 8 percent since October 2015.

OKLAHOMA
The January Business Conditions Index for Oklahoma jumped to 50.1 from December's 49.7. Components of the index from the monthly survey of supply managers were new orders at 37.3, production or sales at 42.6, delivery lead time at 46.1, inventories at 55.7, and employment at 48.1. According to the latest U.S. government data, exports represent approximately 6.1 percent of the state's overall economy. This places Oklahoma in 30th place among the 50 states. Since Canada is Oklahoma's number one export market, exports will remain under pressure since the value of the U.S. dollar to the Canadian dollar has climbed by more than 8 percent since October 2015.

SOUTH DAKOTA
The January South Dakota leading economic indicator rose above the 50.0 threshold to 51.3 from 40.2 in December. Components of the index from the survey of supply managers were new orders at 43.2, production or sales at 48.2, delivery lead time at 57.3, inventories at 52.4, and employment at 52.5. According to the latest U.S. government data, exports represent approximately 3.5 percent of the state's overall economy. This places South Dakota in 47th place among the 50 states. Since Canada is South Dakota's number one export market, exports will remain under pressure since the value of the U.S. dollar to the Canadian dollar has climbed by more than 8 percent since October 2015.
