Welcome to our May report covering results from Creighton's April economic survey of supply managers and procurement experts in nine Mid-America states. Results from last month indicate that the economic growth was slightly positive for manufacturing with stabilizing economic conditions and job losses. **Healthy Job Growth But Unhealthy Economic Growth: More Regulations Contribute to Weak Economy**

Without even a hint of irony, President Obama last week sold, and even trumpeted, his administration's economic accomplishments to the national press. But much like Arthur Miller's Willie Loman, or Meredith Wilson's Harold Hill, the sales job stands in stark contrast to reality.

True, government data show that the U.S. unemployment rate stood at healthy 5.2 percent with more than 200,000 jobs created each month over the past two years. On the other hand, government data indicated that the overall economy expanded at an annualized pace of only 1.4% for the final quarter of 2015 and a 0.5% rate for the first quarter of 2016. This seemingly inconsistent data, that is solid job growth and lousy overall economic growth can be reconciled by peeking behind the headline data. Since the economic recovery began in July 2009, GDP growth has expanded at the slowest pace of any 7-year period since 1947. The healthy job growth has been in part-time, low wage and/or low productivity occupations and industries. For example over the past two years, a reduction in the average hourly work week resulted in effective job losses of almost 420,000. Furthermore, output per worker since the beginning of the economic recovery is roughly one-third the long-term U.S. average. As a result, average percentage gains in compensation are currently approximately 56% of the long term average.

But there has been one area of healthy growth—regulations. According to the Wall Street Journal, the Obama Administration is responsible for six of the top seven years of red-tape creation in the nation's history. Good for economists and lawyers, but not for other workers. Ernie Goss.

**Mid-America Business Conditions Weaken Again: Kansas, Nebraska, North Dakota and Oklahoma Sink Index**

**SURVEY RESULTS AT A GLANCE:**

- Weakness in Kansas, Nebraska, North Dakota and Oklahoma pushed the regional index below growth neutral for August.
- Wholesale inflation gauge drops to its lowest level since the recession of May 2009.
- Approximately 75 percent expect a September Federal Reserve rate hike to have either a positive, or no impact, on their businesses.
- New hiring remains weak with job gains for Arkansas, Iowa, Minnesota, Missouri and South Dakota offset by job losses for Kansas, Nebraska, North Dakota, and Oklahoma.

- The nine-state region has lost almost 9,000 manufacturing jobs since January of this year.

The Creighton University Mid-America Business Conditions Index for August, a leading economic indicator for a nine-state region stretching from Arkansas to North Dakota, slumped for the month. Indices over the past several months have pointed to slow or no economic growth over the next three to six months for the region. However, five of the nine states had overall indices above growth neutral for August.

**Overall Index:** The August Business Conditions Index, which ranges between 0 and 100, declined to 49.6 from July’s 50.6. The regional index, much like the national reading, is pointing to weak, and potentially negative growth through the fourth quarter of 2015.

Growth for nondurable goods manufacturers offset weaker business conditions for durable goods producers including metal manufacturers, agricultural equipment producers and energy equipment manufacturers. Firms in Arkansas, Iowa, Minnesota, Missouri and South Dakota reported positive growth for the month while businesses in Kansas, Nebraska, North Dakota and Oklahoma detailed cuts in economic activity.

**Employment:** The regional employment gauge improved for August, but remains at a level pointing to slow new hiring for the overall region in the months ahead. The job gauge advanced to a weak 52.0 from July’s 50.0. Industries and areas dependent on agriculture and energy are experiencing cuts. For example, metal producers and agricultural equipment manufacturers continue to report job losses.

Since January of this year, the nine-state region has added more than 57,000 nonfarm jobs according to U.S. Bureau of Labor Statistics data. On the other hand, the region lost almost 9,000 manufacturing jobs during this same period of time. Since our survey oversamples manufacturing firms, it is not surprising that our overall index has weakened significantly for states with a large agriculture and energy presence.

This month, supply managers were asked how a September 2015 Federal Reserve rate hike would affect their firm. One-fourth, or 25 percent, expect negative impacts from a rate increase, 5 percent anticipate a positive impact, while the remaining 70 percent expect little or no effect from an interest rate hike in September. August’s results differed little from July when the same question was asked.

**Wholesale Prices:** The wholesale inflation index for August fell to 47.6 from July’s 57.6 and from June’s 64.9 and May’s 69.1. As regional growth has slowed so have inflationary pressures at the wholesale level. Agriculture and energy commodity price declines are diminishing inflationary pressures well below the Federal Reserve's target. This is the lowest inflation reading for the region since the recession in May 2009.

**Confidence:** Looking ahead six months, economic optimism, as captured by the August business confidence index, plummeted to 47.7 from 52.4 in July. Sinking agriculture and energy commodity prices, along with global economic uncertainty, pushed supply managers’ expectations of future economic conditions lower for the month.

**Inventories:** The August inventory index, which tracks the change in the levels of raw materials and supplies, fell to 41.7 from 55.1 in July.

**Trade:** The new export orders index rose to 50.0 from 47.4 in

July: The import index for August sank to 49.7 from July’s 54.7. Despite a strong dollar, which has restrained sales abroad, Kansas added durable goods jobs. This gain more than offset a decline in nondurable goods sector employment, which gained only 0.5 percent. The strong dollar, which has restrained sales abroad, weighed on the state’s durable goods sector in terms of jobs. The nondurable goods sector experienced slight job gains. Our survey results over the past several months, point to weak gains for the overall state economy for the rest of 2015.

OKLAHOMA

The August Business Conditions Index for Oklahoma slipped below growth neutral for a fourth straight month. The index from a monthly survey of supply managers declined to a weak 48.1 from 48.3 in July. Components of the August survey of supply managers were new orders at 51.4, production or sales at 46.0, delivery lead time at 52.4, inventories at 40.4, and employment at 50.4. According to U.S. Bureau of Labor Statistics, Oklahoma has lost approximately 5,000, or 3.6 percent, of its manufacturing jobs since January 2015. The strong dollar and weakness in the state’s energy sector weighed primarily on Oklahoma’s manufacturing sector, particularly metal producers. On the other hand, the state’s oil and gas manufacturing business has fared better than the two U.S. industries experiencing significant pullbacks in economic activity, agriculture and energy. Creighton survey results over the past several months have pointed to economic losses for the overall state economy for the rest of 2015.

Goss Eggs (Recent Dumb Economic Moves)

- After soaking the U.S. taxpayer for 15 billion in tax incentives and loan guarantees, Tun Edison, the world’s largest renewable energy firm, filed for bankruptcy last month. Five years earlier, Solandra, another solar firm, went belly-up after receiving $545 million from the U.S. Energy Department. Even with these high profile failures, the government’s policy of providing solar energy producers with the largest subsidies per kilowatt hour than any other form of energy production.

Survey results for May will be released on the first business day of next month, June 1.

WHAT TO WATCH

- Housing Prices: On the last Tuesday of May, S&P will release the Case-Shiller home price index for March. Yearly growth of more than 5% will be more evidence that a housing recovery is staying on track.
- THE BULLISH NEWS
  - Year over year U.S. wage growth hit an improving 2.5% in April.
  - The Case-Shiller home price index expanded by 5.4% from February 2015 to February 2016.
  - The CPI fell 0.2% in February. In the 12 months through March, the CPI increased 0.9% after advancing 1.0% in February.

- THE BEARISH NEWS
  - The U.S. economy added only 160,000 jobs in April and a weak report (i.e. less than 100,000 jobs and an increase in the unemployment rate) will push the Federal Reserve to foreign raising rates at their June 14-15 meetings.
- Brexit: On June 23, British citizens will vote to exit or remain in the European Union. A majority vote to exit will result in a spiking of global financial volatility. This will push global investors into “safe haven” investments including U.S. Treasury bonds. This move will drive U.S. interest rates lower, the value of the dollar higher and agriculture commodity prices lower.

- The Jobs Report: On June 3, the Bureau of Labor Statistics will release the April jobs report. Another very weak report (i.e. less than 160,000 jobs and an increase in the unemployment rate) will push the Federal Reserve to foreign raising rates at their June 14-15 meetings.

- Due to a weakening U.S. dollar, U.S. corn prices top $4 per bushel for the first time since July 2015.
- The U.S. economy added only 160,000 jobs in April and a weak report (i.e. less than 100,000 jobs and an increase in the unemployment rate) will push the Federal Reserve to foreign raising rates at their June 14-15 meetings.
