

# Outpatient Antimicrobial Stewardship

*Friday, March 31, 2023*

Sophie E. Katz, MD, MPH

# Disclosures

- Research grant from Pfizer (rural antimicrobial tele-stewardship)
- Consultant for Optum (surveillance for biologic products)

# Objectives

1. Discuss the rising prevalence of antibiotic-resistant pathogens and increasing awareness of antibiotic-associated adverse events
2. Describe the factors that drive inappropriate antibiotic use in the outpatient setting
3. List strategies for optimizing antibiotic use in the outpatient setting

# Outline

## 1. Why should we care?

- Discuss the rising prevalence of antibiotic-resistant pathogens and increasing awareness of antibiotic-associated adverse events

## 2. What's causing the problem?

- Describe the factors that drive inappropriate antibiotic use in the outpatient setting

## 3. What can we do about it?

- List strategies for optimizing antibiotic use in the outpatient setting

# Why Should We Care?

Discuss the rising prevalence of antibiotic-resistant pathogens and increasing awareness of antibiotic-associated adverse events

# Case

- Previously healthy, 22-month-old female presents to clinic with 5 days of yellow discharge from a nasal dermoid cyst. Low-grade fever, but otherwise well-appearing.
- Wound culture + for *E. coli*
- What antibiotic do you start?

	Escherichia coli MIC	
Amikacin	<=8	Susceptible
Amoxicillin/Clavulanate	8/4	Resistant
Ampicillin	>16	Resistant
Aztreonam	16	Resistant
Cefazolin	>16	Resistant
Cefepime	8	Resistant
Ceftriaxone	>32	Resistant
Ciprofloxacin	>2	Resistant
Gentamicin	<=2	Susceptible
Levofloxacin	>4	Resistant
Piperacillin/Tazobactam	4/4	Susceptible
Tetracycline	>8	Resistant
Tobramycin	<=2	Susceptible
Trimethoprim/Sulfa	>2/38	Resistant

# The Problem

# The Problem

# CDC Antibiotic Resistance Threats Report, 2019

- Carbapenem-resistant Enterobacteriaceae (CRE)
- *Candida auris*
- *C. difficile*
- *Neisseria gonorrhea*
- *Acinetobacter*
- *Campylobacter*
- ESBL-producing Enterobacteriales
- Erythromycin-resistant GAS
- *Pseudomonas*
- *Salmonella* (typhi and non-typhi)
- *Shigella*
- *Candida*
- Tuberculosis
- VRE
- MRSA
- *S. pneumoniae*
- Clindamycin-resistant GBS

# Pre-antibiotic era?

# Antimicrobial resistant infections

---

High morbidity/mortality

---

Sicken 3 million people/yr in US

---

\$20-35 billion/yr in US

---

>8 million add'l hospital days/yr

---

10 million deaths/year by 2050

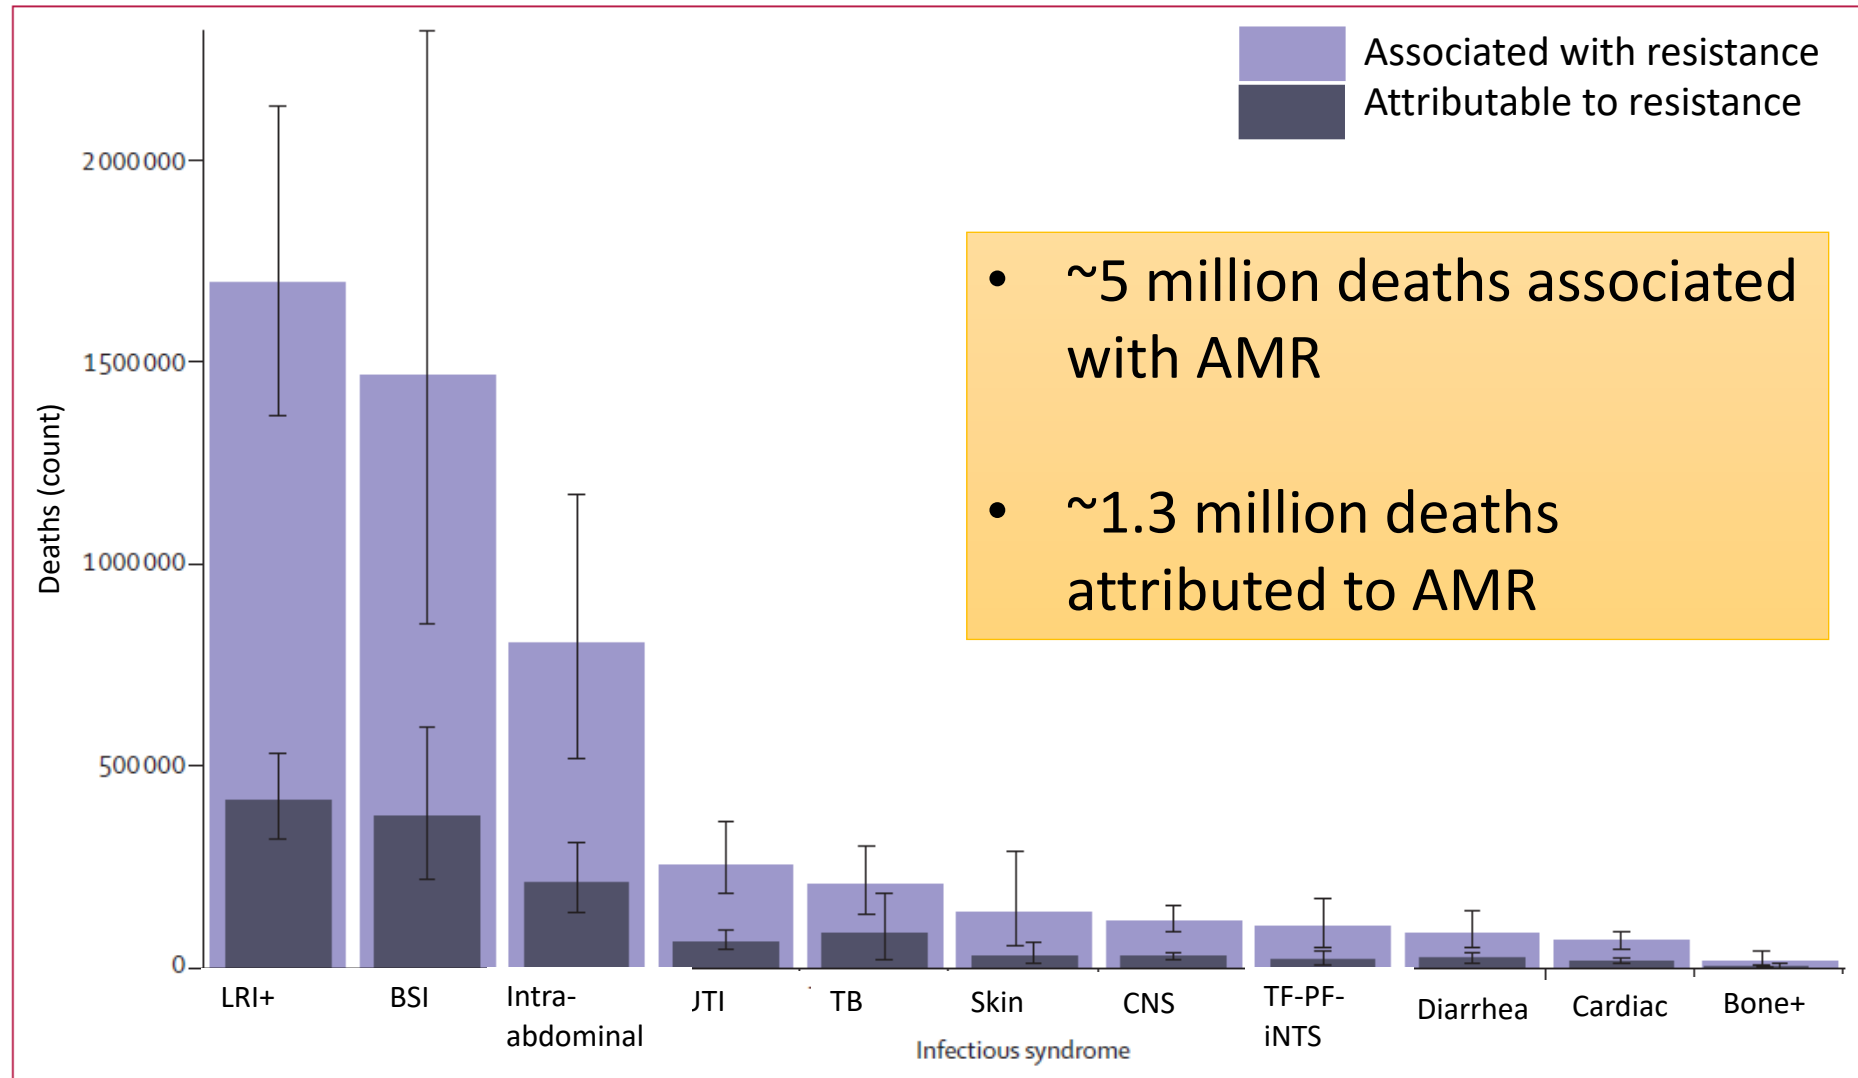

---

CDC, Antibiotic Resistance Threats in the US, 2019  
Review on Antimicrobial Resistance, chaired by Jim O'Neill, 2014

Deaths attributable  
to AMR every year  
compared to other  
major causes of death

# Global deaths from antimicrobial-resistant bacteria, 2019

Lancet, 2022

Alexander Fleming

# Antimicrobial misuse

“...the ignorant man may easily underdose himself and by exposing microbes to non-lethal quantities of the drug make them resistant.”  
(1945)

# Antibiotic Use in the Outpatient Setting

- The majority (>60%) of antibiotic expenditures are associated with the outpatient setting.<sup>1</sup>
- An estimated 80-90% of the volume of human antibiotic use occurs in the outpatient setting.<sup>2,3</sup>
- 20% of pediatric outpatient visits per year result in an antibiotic prescription.<sup>4</sup>
- 28% of outpatient antibiotic prescriptions are unnecessary.<sup>5</sup>
  - 19% in children

# Trends in Antibiotic Prescribing, 2011-2016

King, *Clin Inf Dis*, 2020

# World Health Organization (WHO)

- **Global Action Plan on Antimicrobial Resistance (2015)**

1. Improve awareness and understanding of antimicrobial resistance
  2. Strengthen knowledge through surveillance and research
  3. Reduce the incidence of infection
  4. Optimize the use of antimicrobial agents
  5. Ensure sustainable investment in countering antimicrobial resistance
- Provides a framework for developing national action plans

Antibiotics  
Antivirals  
Antifungals  
Antiparasitics

- **AWaRe (2018)**

- Antibiotic groupings: Access, Watch, Reserve
- Goal: By 2023, 60% of all antibiotics consumed must come from Access

- **World Antibiotic Awareness Week (Nov 18-24)**

# American Rescue Plan

- Sept 2021, Biden/Harris Administration working through CDC
- \$2.1 billion for infection prevention and antibiotic stewardship
  - \$120 million supplemental funding to state and local jurisdictions
  - Expand access to antibiotic stewardship expertise and support antibiotic stewardship interventions in all healthcare settings

# The National Action Plan for Combating Antibiotic-Resistant Bacteria

- First published in 2015, updated in 2020
- 5 goals
  1. Slow the emergence of resistant bacteria and prevent the spread of resistant infections
  2. Strengthen national One-Health surveillance efforts to combat resistance
  3. Advance development and use of rapid and innovative diagnostic tests for identification and characterization of resistant bacteria
  4. Accelerate basic and applied research and development for new antibiotics, other therapeutics and vaccines
  5. Improve international collaboration and capacities for antibiotic resistance, prevention, surveillance, control and antibiotic research and development

# Centers for Disease Control and Prevention (CDC)

- Core elements for inpatient and outpatient antibiotic stewardship
- U.S. Antibiotic Awareness Week (Nov 18– 24)
- Annual reports of national prescribing trends

# Others

- The Joint Commission
  - Inpatient and outpatient standards
- The Leapfrog Group
  - Scores hospitals on their commitment to stewardship
- Infectious Diseases Society of America (IDSA)
  - 10 x '20 Initiative (Surpassed! 14 new anti-infectives)
- Federal Legislation
  - PASTEUR Act (Pioneering Antimicrobial Subscriptions to End Upsurging Resistance)

# What's Causing the Problem?

Describe the factors that drive inappropriate antibiotic use in the outpatient setting

# Lack of Awareness of Treatment Guidelines

- Too many recommendations
- Difficult to keep up with new recommendations

Antibiotic Prescribing and Use in Doctor's Offices

Appropriate Antibiotic Use:  
Community

About +

For Patients +

For Healthcare Professionals -

Outpatient Healthcare Professionals -

[CDC](#) > [Antibiotic Use](#) > [Appropriate Antibiotic Use: Community](#) > [For Healthcare Professionals](#) > [Outpatient Healthcare Professionals](#)

## Pediatric Treatment Recommendations

Format: 

Select One ▾

Antibiotic prescribing guidelines establish standards of care, focus quality improvement efforts, and improve patient outcomes. The table below summarizes the most recent principles of appropriate antibiotic prescribing for children obtaining care in an outpatient setting for the following six diagnoses: acute rhinosinusitis, acute otitis media, bronchiolitis, pharyngitis, common cold, and urinary tract infection.

<https://www.cdc.gov/antibiotic-use/community/for-hcp/outpatient-hcp/pediatric-treatment-rec.html>

  
Monroe Carell Jr.  
children's Hospital  
at Vanderbilt

# Diagnostic Uncertainty / Fear of Complications

- Sometimes it feels safer to prescribe antibiotics
- Must weigh risks and benefits

**UNCERTAINTY**

NOT EVEN THE OWL KNOWS HOW MANY LICKS  
TO THE CENTER OF A TOOTSIE POP.

# US Emergency Department Visits for Adverse Drug Events From Antibiotics in Children, 2011–2015

Maribeth C. Lovegrove, Andrew I. Geller, Katherine E. Fleming-Dutra, Nadine Shehab, Mathew R. P. Sapiano, and Daniel S. Budnitz

Division of Healthcare Quality Promotion, Centers for Disease Control and Prevention, Atlanta, Georgia

- National estimates of ED visits for antibiotic adverse drug events (ADEs) were based on data from CDC, US Consumer Product Safety Commission and the US FDA
- Est. **69,464 ED visits annually** in the U.S. for pediatric antibiotic ADEs

Lovegrove, *JPIDS*, 2018

# Rates of Pediatric ED Visits for ADEs

Lovegrove, *JPIDS*, 2018

# Patient Pressure and Satisfaction

**Effects of Knowledge, Attitudes, and Practices of Primary Care Providers on Antibiotic Selection, United States**  
*Emerg. Infect. Dis.*, 2014

**Guillermo V. Sanchez, Rebecca M. Roberts, Alison P. Albert, Darcia D. Johnson, and Lauri A. Hicks**

- In-depth interviews with 36 PCPs in the U.S.

# Patient Pressure and Satisfaction

- *“We as doctors are business people. We’re no different than running a shoe store. If somebody comes in and wants black shoes, you don’t sell them white shoes. And if you do, they get upset. You can convince a patient, look if I were you I wouldn’t take this antibiotic... but patients in general don’t understand that concept of not taking it if you don’t need it... [and] if you don’t give it to them, they don’t come back to you.”*

# Others

**Habit**

**Workload**

**Time Constraints**

**Decision Fatigue**

# Unnecessary Testing

- Nationally, antibiotics are prescribed during 60% of pediatric visits for pharyngitis, but the expected prevalence of GAS pharyngitis is 30%.
- Guidelines recommend testing only for patients
  - Age > 2 years
  - WITHOUT evidence of viral URI (congestion, cough, etc) and
  - WITH physical exam signs consistent with Strep pharyngitis (exudate, tender cervical nodes, palatal petechiae)

# What Can We Do About It?

List strategies for optimizing antibiotic use in the outpatient setting

# Antimicrobial Stewardship Programs (ASPs)

- Definition:
  - The optimal selection, dosage, and duration of antimicrobial treatment that results in the best clinical outcome for treatment or prevention of infection, with minimal toxicity to the patient and minimal impact on subsequent resistance

Patient safety &  
delivering high quality healthcare!

# Patient/Family Education

- Family focus group; 8 parents
- Ideas on topics for education, best places for and methods of education

Address in non-acute visits (“set expectations”)

Community partners / educational seminars / social media pushes

Add guidance on when antibiotics might be appropriate to clinic website

Interested in education on all topics suggested

- Prophylaxis (pros/cons)
- Non-infectious use of abx
- Specific diseases
- Allergies
- Side effects, resistance

## Effect of using an interactive booklet about childhood respiratory tract infections in primary care consultations on reconsulting and antibiotic prescribing: a cluster randomised controlled trial

Nick A Francis, medical research council health services fellow,<sup>1,2</sup> Christopher C Butler, professor of primary care medicine, head of department of primary care and public health,<sup>1</sup> Kerenza Hood, reader in statistics, director of south east Wales trials unit,<sup>1,2</sup> Sharon Simpson, senior research fellow,<sup>1,2</sup> Fiona Wood, lecturer,<sup>1</sup> Jacqueline Nuttall, senior trial manager<sup>1,2</sup>

- Used interactive pictorial booklet during URI visits with PCPs
- Significantly lowered antibiotic prescribing rates – 19.5% vs 40.8% ( $p < 0.001$ )
- Similar return visit rates and patient satisfaction scores

# Behavioral Science in Practice

# Cluster Randomized Trial

- 47 Primary Care Practices in Boston and LA, 2011-2012
- Randomized to control vs. 1 or more interventions:
  - Non-antibiotic alternatives in order sets
  - Accountable justification for prescribing
  - Peer comparison

Meeker et al, JAMA 2016

# Accountable Justification and Peer Comparison Reduced Antibiotic Prescribing for ARTI

Figure 2. Adjusted Rates of Antibiotic Prescribing at Primary Care Office Visits for Antibiotic-Inappropriate Acute Respiratory Tract Infections Over Time

Meeker et al, JAMA 2016

# Study Conclusions

- Simple, inexpensive tactics grounded in human behavior can reduce inappropriate antibiotic prescribing in the outpatient setting
- ***“Nudge” prescribers to do the right thing***

Meeker et al, JAMA 2016

## Original Investigation

March 2014

# Nudging Guideline-Concordant Antibiotic Prescribing

## A Randomized Clinical Trial

Daniella Meeker, PhD; Tara K. Knight, PhD; Mark W. Friedberg, MD, MPP; Jeffrey A. Linder, MD, MPH; Noah J. Goldstein, PhD; Craig R. Fox, PhD; Alan Rothfield, MD; Guillermo Diaz, MD; Jason N. Doctor, PhD

*JAMA Intern Med.* 2014;174(3):425-431. doi:10.1001/jamainternmed.2013.14191

# Public Commitments

- Randomized Clinical Trial, 5 outpatient adult clinics in LA
- Signed commitment letter with photo in exam rooms
- One year observation period total intervention in 12 weeks at height of influenza season

*When you have a cough, sore throat or other illness, your doctor will help you select the best possible treatments. If an antibiotic would do more harm than good, your doctor will explain this to you, and may offer other treatments that are better for you.*

*Your health is very important to us. As your doctors, we promise to treat your illness in the best way possible. We are also dedicated to avoid prescribing antibiotics when they are likely to do more harm than good.*

Meeker, JAMA Int Med 2014

# Public Commitments

Table 4. Changes in Adjusted Rates<sup>a</sup> of Inappropriate Antibiotic Prescribing for ARIs

Characteristic	Poster Condition		Control Condition	
	Baseline	Final Measurement	Baseline	Final Measurement
Inappropriate prescribing rate, % (95% CI)	43.5 (38.5 to 49.0)	33.7 (25.1 to 43.1)	42.8 (38.1 to 48.1)	52.7 (44.2 to 61.9)
Absolute percentage change, baseline to final measurement (95% CI)	-9.8 (0.0 to -19.3)		9.9 (0.0 to 20.2)	
Difference in differences between poster condition and control (95% CI)	-19.7 (-5.8 to -33.04) <sup>b</sup>			

“When extrapolated to the entire United States, the posted-commitment-letter intervention could eliminate 2.6 million unnecessary antibiotic prescriptions and save \$70.4 million annually on drug costs alone.”

Meeker, *JAMA Int Med* 2014

## A Commitment to Our Patients About Antibiotics

Antibiotics only fight infections caused by bacteria. Like all drugs, they can be harmful and should only be used when necessary. Taking antibiotics when you have a virus can do more harm than good: you will still feel sick and the antibiotic could give you a skin rash, diarrhea, a yeast infection, or worse.

Antibiotics also give bacteria a chance to become more resistant to them. This can make future infections harder to treat. It means that antibiotics might not work when you really do need them. Because of this, it is important that you only use an antibiotic when it is necessary to treat your illness.

How can you help? When you have a cough, sore throat, or other illness, tell your doctor you only want an antibiotic if it is really necessary. If you are not prescribed an antibiotic, ask what you can do to feel better and get relief from your symptoms.

Your health is important to us. As your healthcare providers, we promise to provide the best possible treatment for your condition. If an antibiotic is not needed, we will explain this to you and will offer a treatment plan that will help. We are **dedicated** to prescribing antibiotics **only** when they are needed, and we will avoid giving you antibiotics when they might do more harm than good.

If you have any questions, please feel free to ask us.

Sincerely,

To learn more  
about antibiotic  
prescribing and use, visit

# Reducing Antibiotic Prescribing in Primary Care for Respiratory Illness

Matthew P. Kronman, MD, MSCE,<sup>a,b</sup> Jeffrey S. Gerber, MD, PhD,<sup>c</sup> Robert W. Grundmeier, MD,<sup>c</sup> Chuan Zhou, PhD,<sup>a,b</sup> Jeffrey D. Robinson, PhD,<sup>d</sup> John Heritage, PhD,<sup>e</sup> James Stout, MD,<sup>a</sup> Dennis Burges, BA,<sup>a</sup> Benjamin Hedrick, BA,<sup>a</sup> Louise Warren, MPH,<sup>a</sup> Madeleine Shalowitz, MD, MBA,<sup>f</sup> Laura P. Shone, DrPH, MSW,<sup>g</sup> Jennifer Steffes, MSW,<sup>g</sup> Margaret Wright, PhD,<sup>g</sup> Alexander G. Fiks, MD, MSCE,<sup>c,g</sup> Rita Mangione-Smith, MD, MPH<sup>h</sup>

- Stepped-wedge clinical trial, Nov 2015 – June 2018
- 19 pediatric practices, 57 clinicians
- Intervention: 3 program modules; 11 months
  - Online tutorials and webinars on evidence-based strategies and antibiotic prescribing
  - Booster video vignettes
  - Individualized antibiotic prescribing feedback reports

# Effective Communication

- 72,723 acute respiratory tract illness (ARTI) visits by 29,762 patients
  - 41 clinicians (72%) engaged actively with the intervention

## Rate Ratios of Antibiotic Prescribing During All ITT Analysis Visits for ARTI Overall and by Condition

Condition	Module 1	Module 2	Module 3	Postintervention
ARTI overall	0.96	0.84	0.89	0.93
Viral ARTI	0.63	0.65	0.64	0.6
All pharyngitis	1.06	0.9	0.85	0.96
AOM*	1.01	0.69	0.96	0.93
Strep pharyngitis*	0.71	0.61	0.46	0.66
Sinusitis*	0.75	0.51	0.66	0.59

Kronman et al, *Pediatrics* 2020

\* measured second-line prescribing  
ARTI = acute respiratory tract infection; AOM = acute otitis media

# Study Conclusions

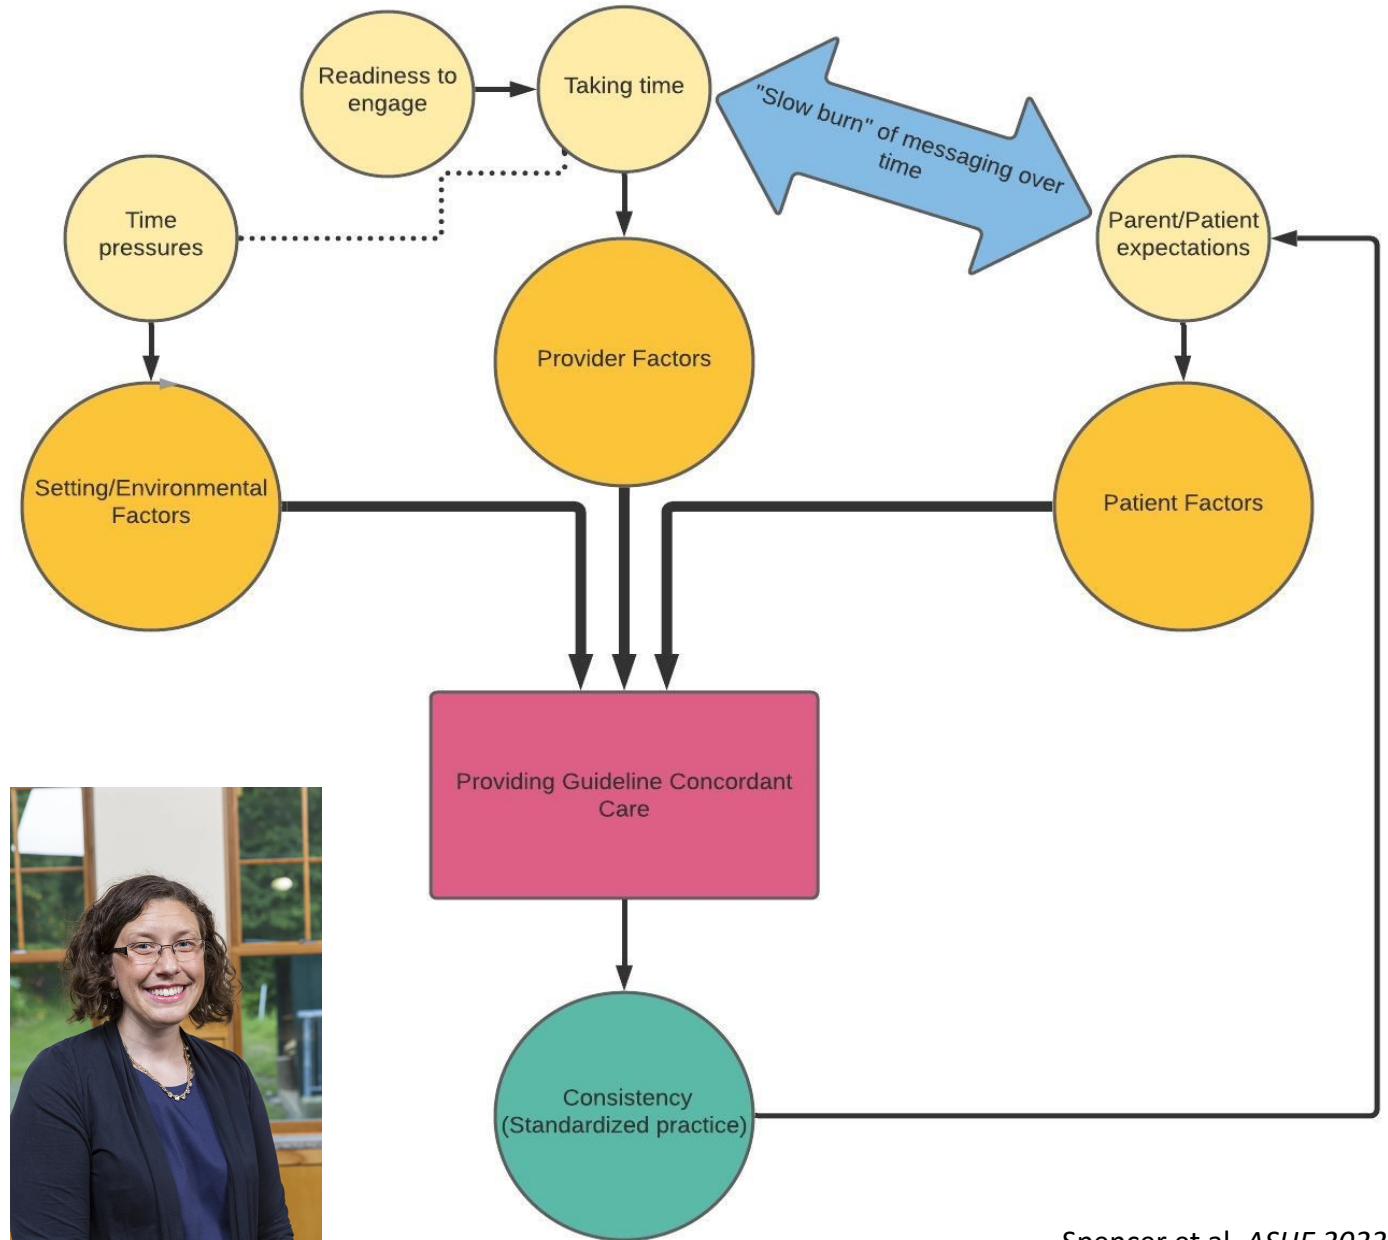

- Decrease in overall antibiotic prescribing during pediatric ARTI visits using the DART QI program
- Reduction in antibiotic prescribing was sustained in the post-intervention period

Kronman et al, *Pediatrics* 2020

# Data - Provider Interviews: Drivers of antibiotic prescribing in ambulatory settings

- 38 providers interviewed
  - Primary care, urgent care, retail settings
  - 22 (58%) advanced practice providers
  - In-person or telephone (thanks, COVID)

Diagram of relationship between major categories and select themes

# Clinical Pathway Guidelines

- Wanted by outpatient providers! (Qualitative interview study)
  - "Blame" not prescribing antibiotics on someone else
- Potential targets:

## Rx variability

Urinary tract infection  
Skin/soft tissue infection

## High-volume diagnoses

Pharyngitis  
Acute otitis media  
Viral URI

## Guideline discordance

Sinusitis  
Pneumonia  
Strep pharyngitis

## Diagnostic stewardship

Strep pharyngitis  
Urinary tract infection  
Viral URI

Other						

# Take Home Points

- The rate of antibiotic resistance is rising faster than the rate of development of new, effective antibiotics.
- The majority of antibiotic use occurs in the outpatient setting.
- Many of the drivers of inappropriate antibiotic use in the outpatient setting can be overcome.
- There are evidence-based methods for reducing inappropriate antibiotic use that can easily be integrated into daily practice.

**Thank you!**

**sophie.e.katz@vumc.org**
